Machine combination: boots and shoes, can be arranged individually

The valve heads only inject the hot air/ozone mixture, if the boots are in position. Good valve head design ensures optimum air circulation - this results in short drying times.

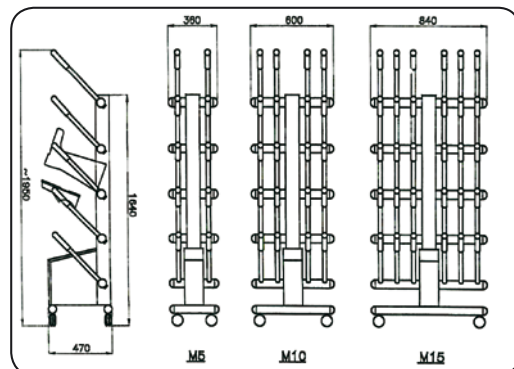

Optimum hygiene for light shoes is guaranteed through special supports for shoes and control of the hot air - ozone mixture.

HYGif feet - M 5 - M 10 - M15

- **Compact design**

Electrical Supply: 230 V, 50 Hz
 Low current consumption: 1.1 kW
 Time control with time switch
 Capacity range 5 -15 pairs
 With pedestal or with rollers
